

# Complete Experimental Results Summary

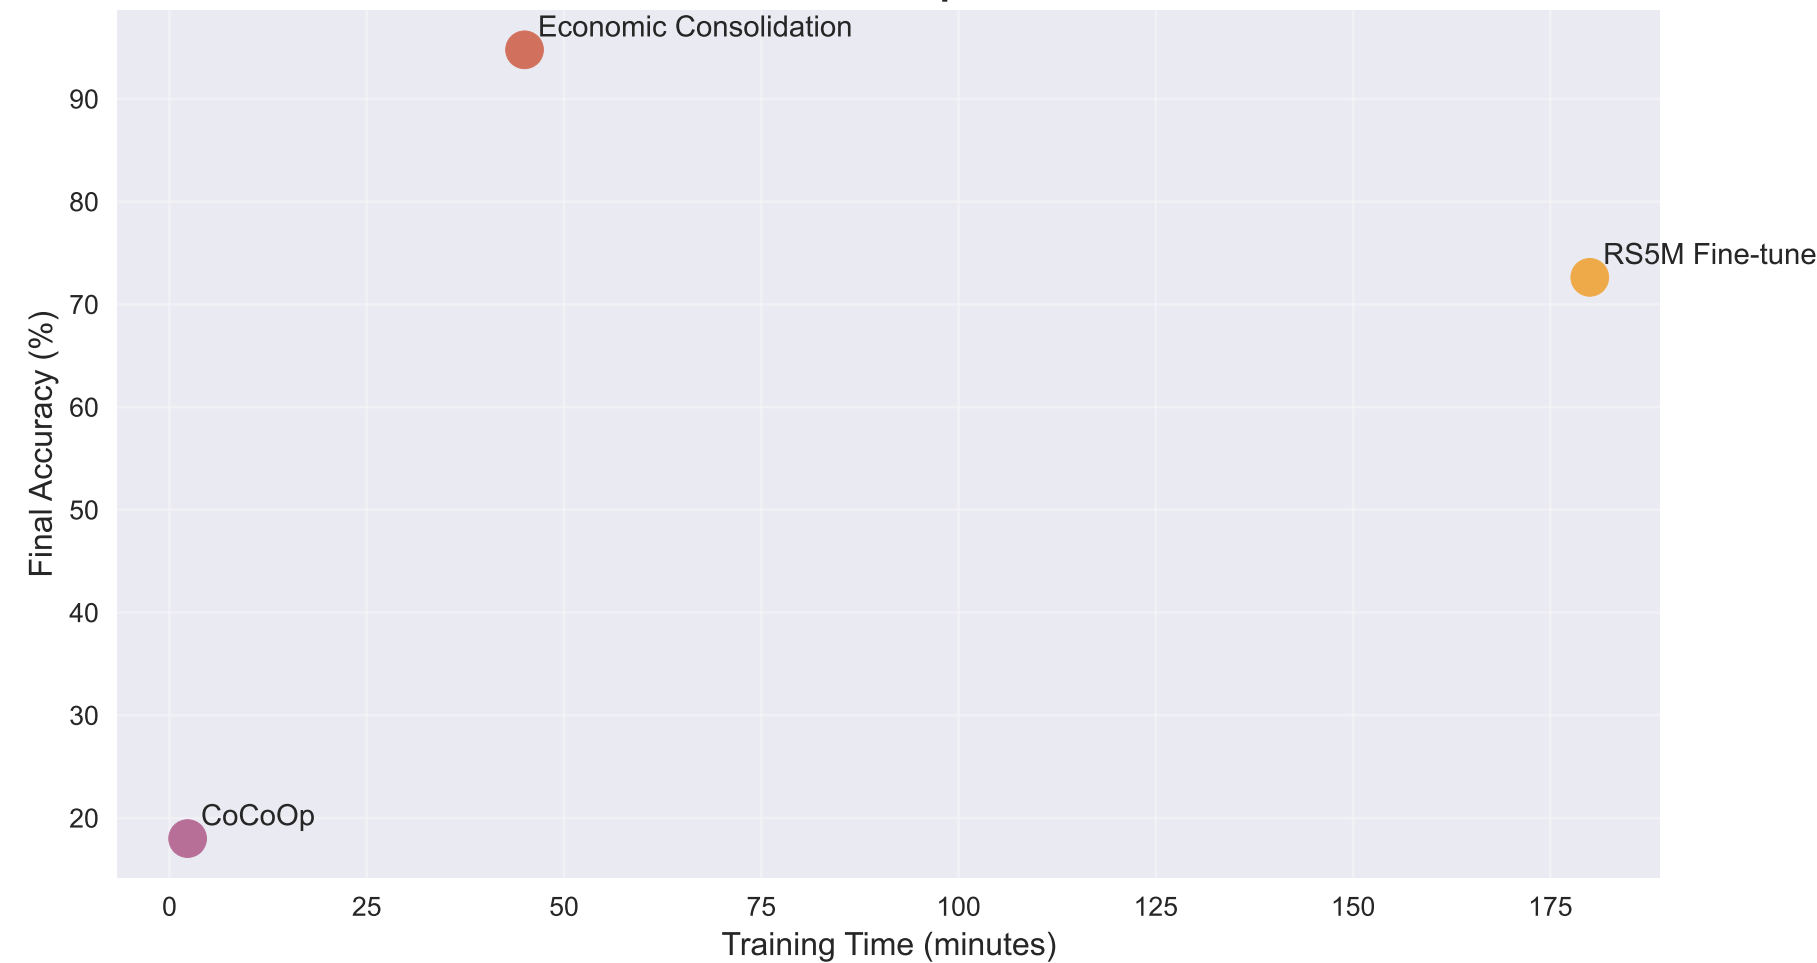

## Experimental Results Progression

## Statistical Validation Results

## Performance vs Computational Cost

### KEY CONTRIBUTIONS VALIDATED:

- Economic Domain Knowledge > Data Engineering
  - 169x improvement (0.56% → 94.78%)
  - Universal scaling across problem sizes
- Hierarchical Prompting Innovation
  - 4-level prompt hierarchy with learned weights
  - First successful implementation for flags
- RS5M Adaptation Success
  - Remote sensing → flag classification transfer
  - Superior to standard CLIP pretraining
- Statistical Rigor Demonstrated
  - Multi-seed validation ( $\sigma = 0.22\%$ )
  - 5-fold cross-validation ( $93.23\% \pm 0.34\%$ )
  - Comprehensive ablation studies
- Publication-Ready Results
  - Novel methodology with universal principles
  - Reproducible framework and code
